Muhammad Ehsan

Full Stack Developer | ASP.NET Core, Angular, Javascript (5 Years Experience)

+92305384203 mehsanaazad@gmail.com Linkedin.com/in/ehsanaazad/

Summary

Full Stack .NET Developer with 5 years of expertise in building web applications and services using .NET Core, C#, Angular, and SQL Server. Developed secure RESTful APIs, JWT authentication, and LINQ queries. Delivered real-world projects like My Clinic KSA (online healthcare), My Operations (hospital management), and the Restaurant Management System with real-time order tracking via SignalR and FCM. Worked on Sisters United, a community platform, and Healthy Diet, integrating Firebase for authentication and storage. Built Find Me Mobile, a comparison tool using web scraping and dynamic Angular interfaces. Skilled in integrating third-party services like Yakeen KSA and payment gateways. Known for clean, maintainable code and end-to-end project ownership.

Skills

Frontend: Angular (API Integration, Routing, Lazy Loading, Pipes, Directives), JavaScript, TypeScript, jQuery, HTML, CSS, Bootstrap, Google Maps, GPS Tracking, FCM

Backend: C#, SQL, Web APIs (REST), Microsoft Identity, Entity Framework Core, Web Forms, LINQ, Dapper, Fluent Validation, Auto Mapper, Push Notifications

Tools and Platforms: Microsoft Visual Studio, Visual Studio Code, Microsoft SQL Server, IIS, Postman, Swagger, GitHub, Jira, Firebase, Firebase Auth, Fire Storage

API Integration: Third-Party APIs, Social Media APIs, Yakeen KSA (ID Verification), Payment Gateways

Work Experience

My Clinic KSA Oct 2021 - Present

Full Stack Dot NET Developer (Angular, Javascript)

- Designed, developed, and maintained RESTful APIs and backend services using C#, ASP .NET Core to support core functionalities across Android, iOS, and web platforms.
- Implemented JWT (JSON Web Tokens))-based authentication to secure APIs and ensure secure user access to the application. Developed token generation, validation, and refresh mechanisms using C# and .Net to maintain secure user sessions and prevent unauthorized access.
- Utilized LINQ (Language Integrated Query) to efficiently retrieve, filter, and manipulate data from SQL databases, optimizing performance and reducing development time.
- Stay updated with the latest technologies, frameworks, and best practices, and apply them effectively while being self sufficient in handling tasks when needed.
- Ensure accuracy in coding, testing, and documentation, following best practices to produce reliable and high-quality software solutions.

NGBS, Islamabad Feb 2020 – Sep 2021

Dot NET Developer

- Develop and consume RESTful APIs and web services for seamless integration with third-party systems.
- Work with front-end developers to integrate back-end services with user interfaces.
- Create and maintain technical documentation, including system architecture, API documentation, and user guides.
- Document code changes and updates for future reference.
- Continuously improve skills, learn to build modern, high-performance web applications and APIs using .NET Core

Education

Virtual University of Pakistan Islamabad
Bachelor of Science in Software Engineering
Relevant Coursework: Object Oriented Programming, Databases, Discrete Math's, Data Structures and Algorithms, Operating Systems, Computer Networks, Advance Data Structures and Algorithms, Information Retrieval

Projects

- **My Clinic App:** My clinic is a mobile/web application designed to provide patients with a seamless and convenient healthcare experience. The app offers 24/7 online services, enabling users to access healthcare resources, book appointments, consult with doctors remotely, and manage their medical needs efficiently. It aims to save time and improve accessibility to healthcare services through a user-friendly platform.

  Key Responsibilities and Contributions
  - Designed, developed, and maintained RESTful APIs and backend services using C# to support mobile app functionalities for both Android, IOS and web platforms.
  - Developed features such as appointment scheduling, real-time doctor consultations, and patient record management.
  - Built the frontend using Angular, focusing on usability, performance, and responsiveness.
  - Conducted thorough testing and debugging to ensure API reliability, performance, and security, delivering a robust and error-free platform.
  - Integrated Yakeen KSA APIs for ID verification to validate patient and staff identities, ensuring compliance with Saudi Arabian regulations and enhancing data accuracy and security.

- **My Operations:** The My Operation is a comprehensive platform designed to streamline hospital and clinic operations. It enables administrators to manage staff by adding new doctors, nurses, and other personnel while updating their profiles and statuses. The system also facilitates doctor scheduling, ensuring efficient resource allocation. Doctors can access patient records, including medical history, reports, and lab test results, to provide better care. This solution enhances workflow efficiency, improves data accessibility, and optimizes hospital management processes.

  Key Responsibilities and Contributions
  - Developed and maintained database schemas and queries using SQL Server, ensuring efficient data storage, retrieval, and management for large-scale healthcare operations.
  - Collaborated with cross-functional teams, including healthcare professionals, to gather requirements, design solutions, and deliver features that align with the needs of hospitals and clinics.
  - Documented API endpoints and provided comprehensive technical support to the mobile and web development teams, ensuring smooth collaboration and integration.
  - Built and optimized the frontend using web form, ensuring a responsive, intuitive, and user-friendly interface for administrators, doctors, and staff.

- **Restaurant Management System:** The Restaurant Management System a comprehensive platform designed for restaurant brands and their branches, providing a unified platform for managing multiple locations while enhancing the customer experience. The system's ability to handle brand and branch hierarchies, real-time order tracking, and detailed analytics made it a valuable tool for both small and large-scale restaurant businesses.

  Key Responsibilities and Contributions
  - Designed and developed a scalable Restaurant Management System using C# and .NET Core to support multi-location operations for restaurant brands and their branches.
  - Integrated third-party APIs for payment processing and location-based services for delivery tracking.
  - Implemented real-time chat functionality using SignalR to facilitate communication between customers, restaurant staff, and delivery personnel.
  - Integrated push notifications using Firebase Cloud Messaging (FCM) to keep users informed about order updates, promotions, and other important alerts.

- **Sisters United:** Sisters United is a platform dedicated to empowering women by fostering a sense of community, offering resources, and creating opportunities for personal and professional growth. It serves as a supportive space where women can connect, share experiences, and access programs designed to build confidence, develop skills, and inspire positive change in their lives and communities. Through its initiatives, Sisters United aims to uplift women and encourage them to thrive in all aspects of life.

Key Responsibilities and Contributions

- Designed and developed the Sisters United platform using modern technologies like Angular and .NET Core, creating a user-friendly and scalable solution.
- Curated and integrated a comprehensive resource library with educational content, toolkits, and guides to support women's personal and professional growth.
- Integrated wellness and mental health support features, such as counseling services and wellness programs, to promote holistic well-being among members.

- **Healthy Diet:** Healthy Diet is a comprehensive platform designed to promote wellness and healthy living through personalized diet plans and health-related guidance. The project connects individuals with healthcare professionals to create tailored nutrition strategies, monitor progress, and achieve health goals. The platform ensures seamless communication and collaboration for optimal health outcomes.

Key Responsibilities and Contributions

- Implemented Firebase Authentication to enable secure user login, including Google Sign-In, ensuring a seamless and secure onboarding experience for users.
- Integrated Firestore for real-time data storage and retrieval, allowing users to save and access their personalized diet plans, health metrics, and progress reports efficiently.
- Utilized Firebase Storage to store and manage user-uploaded files, such as profile pictures, health documents, and meal photos, ensuring secure and scalable file management.
- Conducted rigorous testing and optimization of Firebase integrations to ensure system reliability, scalability, and performance, delivering a robust platform for personalized nutrition and wellness.

- **Find Me Mobile:** Find Me Mobile is an innovative web application designed to simplify the process of discovering and comparing mobile devices. Using advanced web scraping techniques, the platform gathers detailed and up-to-date information about various mobile phones, enabling users to effortlessly explore options, view specifications, and compare different models' side-by-side. With its intuitive interface and comprehensive data, this web app empowers users to make well-informed decisions when choosing their ideal mobile device.

Key Responsibilities and Contributions

- Designed and developed the Find Me Mobile web application, leveraging Angular for the frontend and .NET Core with SQL Server for the backend, creating a scalable and user-friendly platform for discovering and comparing mobile devices.
- Built RESTful APIs using .NET Core to handle data processing, device comparisons, and user interactions, ensuring seamless communication between the frontend and backend.
- Developed and optimized SQL Server databases to store and manage device information, user data, and reviews, ensuring efficient data retrieval and storage.
- Integrated Angular services with .NET Core APIs to enable real-time data updates, dynamic filtering, and seamless user interactions.
- Aggregated user reviews and ratings from multiple sources, storing and analyzing the data in SQL Server to provide comprehensive insights into device performance and reliability.
